Instructions: Use in Emulation Mode on versions 4.1 and above only! Press both the **Start / Stop** and **Set Time** buttons at the same time when the timer is idle and off-line. Hold the buttons down until the display goes blank then release. Press **Start / Stop** to advance to the next digits. Write down the displayed numbers in the blank spaces across one line. Any of the three resetable counters may be individually cleared immediately after viewing the contents while “cS”, “cH” or “cL” is displayed and flashing by pressing and holding **Set Time** until the display changes.

NOTE: If the timer display shows “OL” when attempting to read the meters you must turn off your front room controller then press and hold the Set Time button for 20 seconds until the timer resets. Then follow the instructions above.
